Attleboro's Environmental Master Plan

**Express your support for an Environmental Master Plan (EMP).
A roadmap for Attleboro to become "Sustainable by Design".**

Like the rest of the world, Attleboro faces an uncertain future of potentially disruptive climatic change with community impact. An EMP would help Attleboro make environmental and community sustainability and resilience a priority. Let's have a roadmap for Attleboro to take sustainable actions. We all benefit when we reduce waste, increase efficiency, and protect our resources.

The volunteer sustainability task force, with the support from the mayor's office, is working towards a commonsense environmental plan for the future. The plan would be comprehensive, focusing on six pillars or themes: **Sustainable Growth, Water Security, Conservation, Renewable Energy, Waste Reduction, and Education & Participation.**

Please add your name to support Attleboro's efforts to plan for a better future.

If you have further questions or would like to read the draft of the EMP, contact Mike Davis, MikeDavisNew@comcast.net, former City Councilor and chair of the sustainability volunteer task force.

**Do you believe that Attleboro should have an
Environmental Master Plan for the future?**
